

Let users **play a short game for actions and plan.**

Add three opt-in rewarded flows to Luzia that trade a short sponsored game for actions and plan users already spend. We reviewed 5 ideas: 3 ship, 0 need revision, 2 rejected.

1 FLOW 1 · SLIDE 3

Daily tasks: play for 1 extra AI message

A "Daily tasks" sheet on Chats Home: 3 sponsored 15-second games a day with Luzia, each rewarding 1 extra AI message.

SHIP

WHAT THE JUDGE CHANGED

PRECEDENTS (KNOWLEDGE BASE)

- TAX-2** Time-boxed premium unlock or trial ("sponsored session")
- EX-MUSIC** Spotify and Pandora (audio; freemium subscription)
- CANN-1** Mechanisms that raise paid conversion (complementarity)

Ideas we rejected, and why

Every candidate the judge scored, with its final verdict. Only SHIP becomes a flow; REVISE is never promoted. Weighted score out of 5.

ID	IDEA	VERDICT	SCORE	WHY
P3	Daily tasks on Chats Home Product change	SHIP	4.80	SHIP at 4.8 (v4 after 2 revisions). See slide 3.
P5	Guest sample of Upgrade to Luzia+ Product change	SHIP	4.70	SHIP at 4.7 (v1). See slide 5.
P2	Try Upgrade to Luzia+ for a game Existing mechanic	SHIP	4.35	SHIP at 4.35 (v3). See slide 7.
P4	Sponsored AI usage session Product change	REJECT	4.45	REJECT after 2 revisions: unit-economics scored 2 (< 3); still REVISE after round 2. Top concern: The COGS for a 3-action reward (\$0.0054) significantly exceeds the 30%...
P1	Try Deep reasoning for a game Existing mechanic	REJECT	4.25	REJECT after 1 revision: revision stalled (weighted +0.05, below +0.2) with the same gate failures. Top concern: The cost to serve the reward (\$0.0900) significantly...

Brainstormed, not developed: Guest sample of Start a task · Sponsored start on Chats Home · Bonus pass · Streak bonus for daily tasks · Wait-or-watch bonus for "New chat"

Obvious baseline the proposer had to go beyond: A "Watch a video for free AI Usage Quota" button on Chats Home. · An interstitial video every few messages. · Banner ads on the store and Chats Home.

Method and mock fidelity

- 1. **Explore.** 175 steps, 38 states, 171 edges, 1 external surface in 26 min; stopped: budget steps. 107 actions deliberately not explored.
- 2. **Understand.** 38 screens in the product model; 15 claims verified against on-screen text, 0 inferred. Synthesized by llm.
- 3. **Mock + QA.** 33% of screens rebuilt in HTML; 134/135 navigation flows pass.
- 4. **Propose.** 10 ideas, 5 developed into typed proposals (patch, storyboard, assumptions). Generated by stub.
- 5. **Judge.** 10 judgment rounds for 5 proposals: code gates first, then a rubric scored by llm; the verdict is computed in code (ship ≥ 3.8, every criterion ≥ 3, ≤ 2 rounds).
- 6. **Slides.** Every frame is a screenshot of the patched mock driven through its runtime API; callouts sit on measured DOM positions; numbers come from economics code.

QA FIDELITY (MOCK VS THE REAL SCREENSHOTS)

MEAN COMPOSITE		FLOW PASS RATE		HTML SCREENS	
0.72		99%		33%

Cost and limitations

MODEL SPEND FOR THIS APP (FROM COST.JSONL)

STAGE	LIVE CALLS	CACHED	TOKENS IN	TOKENS OUT	USD
explore	108	23	306.2k	62.8k	\$0
understand	3	0	58.1k	21.9k	\$0
mock	11	0	70.6k	97.7k	\$0
qa	11	0	71.8k	135.1k	\$0
judge	22	0	1.6M	64.1k	\$0
propose	5	0	320.2k	19.9k	\$0
slides	4	0	26.3k	25.0k	\$0
Total	164	23	2.5M	426.5k	\$0

Gemini free tier: calls cost \$0; tokens are still logged. Models: gemini-3.5-flash-lite, gemini-3.8-flash, gemini-2.5-flash, gemini-3.5-flash, gemini-3-flash-preview, gemini-3.1-flash-lite. Cached calls replay from disk at no cost.

LIMITATIONS

- Explored on an Android emulator (guest account); 107 actions left unexplored by guard rails or scope, listed in the model viewer.
- 0 product-model claims inferred rather than observed; the economy review is the human checkpoint for them.
- Revenue per view uses KB eCPM ranges with a non-game haircut; some constants are inferred. ARPDau appears only as a labelled scenario.
- The ad in the frames is simulated by the mock; real fill, creatives and completion rates vary by market.
- The judge is a separate call of the same model family as the proposer; its single-fault calibration table is in judge-eval.md.
- This run used deterministic stubs instead of model output for: proposals.

How this runs across hundreds of apps

Storage and versioning

- Screenshots, element lists and HTML are content-addressed blobs; artifact JSON references them by hash.
- A model version is keyed by package, version code and a UI fingerprint of the core flows, which also catches over-the-air updates.
- A diff between two model versions (screens, walls, prices, offers) is itself a sales signal.

When to re-explore

- Daily store version poll; weekly no-LLM smoke replay of the core flows and the path to the wall.
- Drift above 10% or any price change triggers an incremental re-explore from the known graph (about 20% of first-run cost).
- A new ad format re-runs only propose and judge.

Where humans review

- App onboarding and login (15 min); economy review, the highest-leverage step (10 min).
- Deck approval before any customer sees it (15–30 min); exception queue for blocked apps.
- Monthly judge audit against labelled outcomes.

Cost and sales fit

- Prospect scan without a mock $\approx$ \$5 of model calls; full pitch pack $\approx$ \$20–25 plus 45–60 min of human review.
- The deck, clickable prototype and sizing sheet attach to the CRM deal; each SHIP's integration snippet becomes the implementation ticket.
- Post-launch opt-in, completion and IAP guardrails flow back to recalibrate economics and the judge.
